

Laminate Flooring Care Guide

- Place door mats at all entrances to property
- Never push or drag furniture around – always lift
- Use felt pads on all furniture to prevent scratches and stains
- Vacuum regularly
- Use a soft brush to sweep
- Keep pets nails trimmed

Don'ts

- Over wet the laminate if attempting to remove stains
- Use anything abrasive
- Leave puddles to soak in
- Allow it to be subject to direct sunlight

Cleaning Laminate Flooring

It's always important to refer to the manufacturer's notes to see which cleaning products should be used on your laminate. Other than that, a simple soft broom and a mop will be the only tools you'll need to keep it looking as good as new.

Spills and Dirt

- Don't use a soaking wet mop on laminate; if water soaks through it can seep into and under the layers causing warping.
- Any spills should be dealt with using a damp cloth and the residue wiped up with a dry cloth immediately.
- Keep the floors dirt and dust free by regularly sweeping with a soft broom or vacuuming with a hard floor attachment. A dry microfibre mop or cloth can be used to remove and collect loose dirt and dust.

Intensive Cleaning

- For a more intensive clean, use a well-wrung microfibre mop or floor cloth with specialist cleaning fluid, ensuring the residue is dried up afterwards.
- It is not recommended that floors with bevelled edges or V grooves are ever cleaned with a damp cloth or mop. This could cause dirt to accumulate in the grooves which could prove difficult to remove.
